

# Architectural Reflector Finishes

## Architectural Colors & Finishes

Kurt Versen reflector finishes have been expanded to include the Prescolite D2, LiteFrame® and Megalūm™ product lines, which allows a common finish throughout the space.

# Finish options

Our Downlights include a wide variety of finish options, from Specular, which creates a crisp quiet ceiling plane, to Softsheen™ and Softglow®, which enhance the aesthetic of the ceiling plane.

 <p><b>Kurt Versen Specular</b> A visually quiet finish with a deep, glossy appearance, the Specular by Kurt Versen illuminates the architecture without competing with it.</p>  <p><b>Kurt Versen SoftSheen™</b> SoftSheen™ is an 'in-between' finish to the Kurt Versen Specular and Softglow®; an essence of ceiling brightness is apparent while the resulting glare is diminished. In all colors, the finish is capable of visually calming these higher lumen sources.</p>  <p><b>Kurt Versen Softglow®</b> Kurt Versen Softglow® reflectors raise the ceiling plane visually by creating controlled brightness without glare at the aperture. Kurt Versen Softglow® has a soft luminous effect somewhat opposite that of a specular trim.</p>	 <p><b>Specular</b> Specular is the standard finish for most Prescolite fixtures. Specular gives a precise cutoff for a glare-free ceiling appearance with an iridescence suppressed Alzak anodized finish.</p>  <p><b>Semi-Specular</b> Semi-Specular exhibits a slightly diffuse visual appearance in the ceiling plane compared with Specular, while also exhibiting an iridescence suppressed Alzak anodized finish.</p>  <p><b>American Matte™ (MFC)</b> Prescolite's patented American Matte™ (U.S. Patent No. 6,254,256) finish applies an evident surface texture to the reflector. This gives a softer cutoff with a dynamic brightness and does not show fingerprints.</p>
